

Graduate Intern

EPICOR SOFTWARE CORPORATION is a global leader delivering industry-specific business software solutions to the manufacturing, distribution, retail, and services industries. With over 40 years of experience serving small, midmarket and large enterprises, Epicor has more than 20,000 customers in over 150 countries.

India Technology Centre was established in 2015 and houses product engineering, professional services, customer support, IT & cloud services, global marketing, HR and Finance functions.

What you'll be doing

We are offering internships in our Product Engineering group. Software Engineer Interns work on joint projects with Epicor Software Engineers over a 6 or 12-month period in an area that is related to Epicor's forward-thinking product interests and also relevant to his/her interests. Specific projects for the summer will be determined prior to their arrival, but it's expected that the work you do will be included as part of a shipping product release within six to twelve months.

A few candidate areas you'll be working on:

- Designing and implementing features in existing and new products.
- Designing and implementing tools to assist with cloud deployments.
- Authoring automated tests and other development processes.
- Working with customers, support, and QA to resolve bugs and support issues.
- Reviewing and providing detailed feedback on documentation and test plans for features.
