mscripts Systems India is primarily focused on hiring talent and investing in it. As a result, we are extremely excited to explore the possibilities of getting interns from your college, train them and at the same have them submit an industry relevant project report that helps them in their graduation. mscripts is seeking dynamic and talented engineers to explore working on cutting-edge technologies.

Who are we?

mscripts™ is a fast growing mobile health start-up with headquarters in San Francisco, CA and an exclusive development center in Bangalore, India. We provide effective and contextual medical communication platforms to pharmacies and other health and wellness organizations to help them engage with patients. These solutions are delivered using mobile and web applications delivered in a Software as a Service ("SaaS") model. We're growing rapidly and have over 3 million active users of our platforms across 30+ pharmacy chains in the US. Our solutions not only help patients in medication management, but it also helps pharmacies and pharmaceutical companies to actively engage with patients to ensure that they adhere to their medication plans. Our products consist of a mixture of large enterprise and transactional systems, data management systems, and mobile technology.

What are we looking for?

The primary attribute we are looking for is ATTITUDE, a willingness to learn, a hunger to experiment and not be afraid to fail, be a team player and do whatever is needed to make our customers use our solutions effectively.

In addition to the above you must possess the following competency & attributes:

- Pursuing a Bachelors Degree in Computer Science or Information Science/Technology/Telecommunications/Electronics & Communications (without any back-logs)
- Consistently have an Aggregate / Average score of 6.0 CGPA & more
- Good understanding of Core Java and related technologies like J2EE frameworks, Spring MVC, design patterns etc.
- Must have knowledge and/or experience in the various aspects of Software Development Life Cycle – such as designing, writing elegant code with proper comments/documentation, doing unit testing, performing integration testing, and working with functional experts to understand the requirements.
- Must be self-driven and have a hunger for technology
- Must demonstrate good judgment and pragmatic approach in delivering software that optimizes technology architecture across business needs and keeping in mind technology constraints
- Must have very strong written and communication skills that can help influence stakeholders
- Must have the humility to back out in the face objections or when better options exist

How are we going to select you?

The recruitment process would include written tests, group discussions and interviews. The final announcement on choosing the candidates will be done by end of the recruitment process.

We do not expect you to bear any financial burden during the period of internship. Therefore we will pay you a stipend during internship of Rs. 20,000 / Month (Taxes as applicable will be deducted as per IT laws).

At the end of internship, if we are mutually excited with each other we will offer you a full time permanent role in mscripts and your annual compensation would be INR 6,60,000/ annum.

Well, are YOU interested to be part of mscripts' exciting journey? Then get ready to meet us at your campus on Friday, 17th August 2018.

Rest of the details will be shared once you complete the registration process at your campus placement department.
